- Warms instantly! 20 seconds versus 30 or more minutes to heat up.
- Short, yet sufficient and effective sessions.
- Uses less electricity and takes less time with great results.
- Fast acting! Relief of symptoms happen quickly!
- You can breathe! Head outside the tent makes a huge difference in comfort and endurance.
- Effective even with clothes on for 5-10 minute treatments!
- Amazing, deep sweats in 15-20 minutes or even less! (not 30-60 minutes or not at all!)
- It is safe, simple, strong, pure, portable, medical grade and very affordable!

EFFECTIVE, SAFE, DURABLE & CONVIENT TO USE

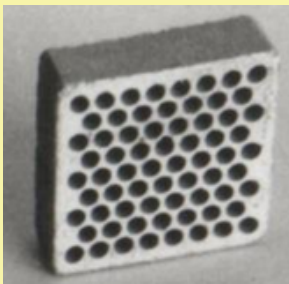

Very low EMF using a patented technology with ceramic semi-conductors

Many environmental doctors who work with those who are EMF sensitive or multi-chemical sensitive use the Relax Sauna in their homes and clinic and recommend the Relax Sauna to their patients. There is NO EMF above the Knees when you are in the Relax Sauna. The little bit of EMF by the radiators is 3rd & 7th lowest in EMF among the 21 most common household appliances. However, the microwave energies coming out of your cell phone or the wi-fi in the room you are in is about 100 times more dangerous than the EMF of any household appliance or sauna. We mentioned this to a Doctor who is one of the foremost authorities on the dangers of EMF in this world, and he agreed with us. (He also bought 2 relax saunas from us.)

MEDICAL LAMP
The most powerful & only FDA approved medical grade far infrared lamp

The patented ceramic semi-conductor is a Technology Breakthrough

The Relax Sauna semi-conductor transforms electricity into 95-99% pure Far Infrared Energy. Only Far Infrared Light penetrates deeply into the cells and resonates with the water molecules. Only Far Infrared Energy Pulsates your Water Molecules.

There are 20 of these semi-conductors in each of two 700 watt radiators in the Relax Sauna, that raise core Temp 2. 7°- 4.2° in 25-60 minutes. Relax Saunas are probably the only realistic option for thermal therapy at home that can replicate or exceed results seen in published studies.
